

Nambour station accessibility upgrade

Project update – November 2016

Upgrade works on the platforms and in the subway are well underway at Nambour station as part of Queensland Rail's \$212 million upgrade program.

Project progress

The following construction activities were recently completed:

- installation of new awnings on the platform and station building
- preparation of lift pits
- safe asbestos removal from station building, in compliance with national and state Occupational Health and Safety controls
- demolition of concrete structures.

Upcoming work

In the coming weeks, customers and the community can expect to see the following construction activities:

- reopening of the southern section of the island platform
- closure of the northern section of the island platform in order to upgrade the platform and customer toilet facilities
- Energex work in western car park.

Platform changes

In the coming weeks, the island platform will be reopened for customers, and temporary platform 2 will be closed. Station announcements, signage and station staff will assist customers during this time.

During the upgrade of the northern end of platform 1, access to the platforms will be via the Civic Way gate (near the lead bus stop).

The temporary toilets will be relocated to the staff carpark area at the southern end of the bus interchange adjacent to Mill Street. Directional signage, lighting and CCTV will be installed.

Construction impacts

Customers, residents and businesses adjacent to Nambour station may experience the following:

- noise associated with heavy machinery
- use of reversing beepers
- changed traffic and parking conditions
- mobile lighting towers for night works
- increased vehicle movements around the work zones.

Residents and other stakeholders will be given advance notification of construction activities likely to cause impacts, including after hours work (nights and Sundays, as required).

Queensland Rail thanks you for your patience during these important works.

Keeping you informed
