

For your information

SEQ Rail Stabling Program - Elimbah Project site office establishment

Construction of the new Elimbah stabling facility to house eight six-car trains will commence in July 2015. It is expected to be operational by July 2016.

Construction of a project site office, with access from Sanna Lane, is due to start the week commencing Monday, 20 July 2015, weather permitting.

As part of the site establishment, work will include:

- Survey of the work area
- Construction of site access gates
- Placement of temporary fencing and erosion and sediment controls
- Removal of vegetation within the project boundary
- Stripping of top soil and earthworks to construct level areas for site compounds
- Concrete works for footings and paths
- Placement of site sheds and connection of utilities
- Construction of a site office car park.

The project team will endeavor to minimise impacts to neighboring residents and businesses including noise and dust during the establishment of the site office and construction of the Elimbah stabling facility.

You may notice some changes around your local area and on site including:

- Increased truck and vehicle movements along Beerburrum Road, Sanna Lane and Mansfield Road from Monday to Saturday 6:30am to 5:00pm
- Installation of security lighting onsite that will be screened from residential areas
- Establishment of storage and lay down areas for construction materials.

Every effort will be made to keep disruptions to a minimum. We appreciate your patience during the construction period and will continue to update you as work progresses.

Project information

The South East Queensland (SEQ) Stabling Program involves the design and construction of new or additional train stabling facilities in four locations: Robina, Banyo, Elimbah and Woombye.

The \$116 million project was announced on Wednesday, 6 May 2015. The SEQ Stabling Program is part of the broader New Generation Rollingstock project that will see 75 new suburban six-car trains added to the South East Queensland City network, a 30 per cent increase of the current fleet.

Leighton Contractors will design and construct the new stabling facilities to help house 75 new six-car trains that will be progressively delivered, starting in late 2015.
