

For your information

SEQ Rail Stabling Program - Robina Project site office establishment

Work to expand the Robina stabling facility to accommodate an additional four six-car trains will commence in July 2015. It is expected to be operational by March 2016.

Construction of a project site office within the existing Robina stabling yard is due to start the week commencing Monday, 27 July 2015, weather permitting.

As part of the site establishment, work will include:

- Placement of temporary fencing and erosion and sediment controls
- Minor earthworks to construct level areas for site compounds
- Placement of a laydown facility adjacent to the Robina Raptors club house
- Concrete works for footings and paths
- Placement of site sheds and connection of utilities

The project team will endeavor to minimise impact on neighboring residents and businesses, including noise and dust, during site establishment and construction at the Robina stabling facility.

You will notice some changes around your local area and the car parks on both sides of the rail line including:

- Increased truck and vehicle movements on Robina Town Centre Drive, Laver Drive and Promethean Way from Monday to Saturday 6:30am to 5:00pm
- Truck and construction vehicle movements in the car parks
- Establishment of storage and lay down areas for construction materials.

Every effort will be made to keep disruption to a minimum. We appreciate your patience during the construction period and will continue to update you as work progresses.

Project information

The South East Queensland (SEQ) Stabling Program involves the design and construction of new or additional train stabling facilities in four locations: Robina, Banyo, Elimbah and Woombie.

The \$116 million project was announced on Wednesday, 6 May 2015. The SEQ Stabling Program is part of the broader New Generation Rollingstock project that will see 75 new suburban six-car trains added to the South East Queensland City network, a 30 per cent increase of the current fleet.

Leighton Contractors will design and construct the new stabling facilities to help house 75 new six-car trains that will be progressively delivered, starting in late 2015.
