

## Woombye Stabling Facility

### Project Questions – Vegetation screening

**Will there be adequate space for a vegetation buffer between the wetland/detention area immediately east of the stabling site (between the stabling facility and the existing railway line) and considering the proposed path of the proposed rail duplication)?**

Upon completion of detailed design, Queensland Rail will work with the Woombye community to established preferences for the location of the additional planting. Once the location of the additional planting is confirmed, Queensland Rail will advise when planting can be completed. This is to ensure the tubestock isn't damaged by the operation of machinery on site during construction.

**Will Queensland Rail construct a 30 metre buffer ASAP given the location of the stabling yard construction footprint is relatively fixed.**

Upon completion of detailed design, Queensland Rail will work with the Woombye community to established preferences for the location of the additional planting. Once the location of the additional planting is confirmed, Queensland Rail will advise when planting can be completed. This is to ensure the tubestock isn't damaged by the operation of machinery on site during construction.

**The recently established vegetation buffer is becoming weed infested. The Woombye community requests Queensland Rail investigates and takes remedial action as required please.**

Tree planting and 18 months maintenance is being undertaken by local business, Barung Landcare, one of the leading landcare specialists in Queensland.

Monthly maintenance is undertaken on the site and last inspection was scheduled for 20 November where community feedback was provided. Following this visit, some additional maintenance activity will occur in the coming weeks.
